

# ClassyFM Superadmin Guide

This guide covers the features available only to accounts with the **Superadmin** role.

Superadmins can do everything a content editor can — those tasks (programs, broadcasters, news, podcasts, ads, and so on) are documented in the [Admin Guide](#). In addition, superadmins see a **System** group at the bottom of the sidebar with two extra sections: **Users** and **Activity Log**. Those are described below.

**Roles at a glance:** there are two roles — **Admin** (content editors) and **Superadmin**. Only superadmins can manage user accounts and view the Activity Log.

## Table of Contents

---

- [Users](#)
  - [Activity Log](#)
  - [Dashboard "Recent activity" panel](#)
-

# 1. Users

---

Manage who can sign in to the admin panel. **Sidebar → System → Users.**

The list is searchable and sortable (by name and email) and shows each user's **Role** (an amber "Superadmin" or gray "Admin" badge) and **Status** (Active / Inactive). Your own row is marked **Your Account** and has no action buttons — manage your own details from your **Profile** instead.

## Create a user

1. Click **Add User**.
2. Fill in the fields and click **Save**.

### Fields

| Field    | Notes                                                                                       |
|----------|---------------------------------------------------------------------------------------------|
| Name     | Required.                                                                                   |
| Email    | Required and unique.                                                                        |
| Password | Required for a new user; minimum 8 characters.                                              |
| Role     | <b>Admin</b> or <b>Superadmin</b> . Superadmins can manage Users and view the Activity Log. |
| Active   | Untick to disable the account without deleting it.                                          |

## Edit a user

Open a user with the **Edit** pencil, change what you need, and click **Save**.

- **Password:** leave the "New password" field **blank to keep** the current password. Entering a new one resets it **and signs that user out of all their sessions**.
- **Deactivating** a user (unticking Active) also signs them out everywhere and blocks them from signing in.

## Delete a user

Click **Delete** and confirm *"Delete this user?"*. You cannot delete your own account from here.

---

## 2. Activity Log

---

A read-only, append-only history of changes made in the admin panel — the accountability trail for who did what. **Sidebar → System → Activity Log.**

The table is searchable (by action, entity, detail or user) and sortable. Each row shows:

| Column | Meaning                                                                                                                                             |
|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| Time   | When the action happened.                                                                                                                           |
| User   | Who did it (their email at the time).                                                                                                               |
| Action | What kind of change — create, update, delete, login, logout, ban / unban, hide / un-hide, password reset, password change, feed refresh, and so on. |
| Entity | What was affected, with its type and <code>#id</code> .                                                                                             |
| Detail | A short human-readable description.                                                                                                                 |

The log records IP address per entry. It cannot be edited or deleted — it is a permanent record.

---

### 3. Dashboard "Recent activity" panel

---

On the Dashboard, superadmins see an extra **Recent activity** panel (content editors do not). It lists the most recent Activity Log entries with a "time ago" label and a link to the full **Activity log** — a quick way to see the latest changes at a glance.
