

Handover Document — ClassyFM Website

Handover record for the development of the **Classy 103.4 FM Padang** website and admin panel, per the scope agreed in the *Website Development Offer & Proposal* (`Penawaran_ClassyFM.md`), section 2.8 (Deliverables).

Project	Classy 103.4 FM Website & Admin Panel
From	habiburrahman (Web Developer)
To	Classy 103.4 FM Padang Management
Handover date	-----
Reference	Development Offer & Proposal (approved)

1. Summary of Deliverables

Per proposal section 2.8, the following three items are delivered:

1. Complete source code. All source code for the website and admin panel — a Go server with server-side HTML rendering, the admin CMS, and all templates and static assets embedded directly in the binary (self-contained via `go:embed`). Data is stored in MySQL.

- Repository location: _____ (fill in: Git URL or handover medium)

2. Live production website. The application is deployed and running on the production server.

- Public site: <https://classyfm.co.id>
- Admin panel: <https://classyfm.co.id/admin>

3. Handover document & usage guides. This document plus a set of supporting guides (available as Markdown and PDF under `docs/`):

Document	Contents
Quickstart (<code>QUICKSTART</code>)	Day-to-day operational steps to get started.
Admin Guide (<code>ADMIN_GUIDE</code>)	Full content-management guide for content editors.
Superadmin Guide (<code>SUPERADMIN_GUIDE</code>)	Superadmin-only features (Users, Legal, SEO, Activity Log).
API Reference (<code>API</code>)	Public JSON API documentation for the mobile app.

2. Admin Account Credentials

An initial admin account (role **Superadmin**) has been created for Classy 103.4 FM.

Field	Value
Panel URL	https://classyfm.co.id/admin/login
Email	-----
Password	-----
Role	Superadmin

Important — change the password immediately. After the first login, change the password via the **Profile** menu (click the account name at the bottom of the sidebar, then the **Change Password** section; or open `/admin/profile`). Minimum 8 characters. Store the credentials securely and do not share them.

Additional admin accounts for other team members can be created via the **Users** menu (superadmin only) — see the Superadmin Guide.

3. Operator Note (Break-glass Access)

The system includes a built-in emergency (break-glass) login using the reserved email `root@local.system`, whose password is the server's `SESSION_SECRET` value. This login has no row in the users table and works even when the database is unavailable. It is intended for the server operator/administrator in emergencies (e.g. recovering access), **not for day-to-day use**, and is not the credential handed over in section 2 above. Rotating `SESSION_SECRET` invalidates any active break-glass login and impersonation sessions.

4. Infrastructure & Deployment Summary

- **Application:** a single self-contained binary — templates and static assets are embedded, keeping deployment simple with minimal dependencies.
 - **Database:** MySQL.
 - **Server service:** runs as a `systemd` service on the production host.
 - **Backups:** automated scheduled data backups (`systemd` timer).
 - **Network:** the site sits behind Cloudflare; CSS/JS changes may require a cache purge to appear immediately.
 - **Image uploads:** program/broadcaster/news images are stored on the server disk and served under `/uploads/`.
-

5. Scope & Limitations

Included in this handover:

- Development of the public site and admin panel per the proposal scope.
- Deployment to the production server.
- Functional testing before handover.
- This handover document, the basic usage guide, and admin account credentials.

Not included (Classy 103.4 FM's responsibility, unless otherwise agreed):

- Domain, hosting/server, and SSL certificate costs.
 - Maintenance and post-handover support — can be proposed separately if needed.
 - Development of new features beyond the agreed scope.
-

6. Handover Acceptance

By signing this document, both parties confirm that the work has been delivered and accepted per the agreed scope.
